## **MERIDIAN AUDIO FOR EVERYONE**

Meridian believes that the listener should feel every emotion. It's this experience that shapes not just the company's philosophy but its whole approach to innovation in the home technology sector.

At the heart of this innovation is Digital Signal Processing (DSP). DSP Technology within Meridian products is responsible for the delivery of pristine, hi-res audio for a range of home cinema and media room applications.

Perfect for theatres, distributed audio and music systems, Meridian's DSP loudspeakers deliver a powerful, authentic audio performance in any room size thanks to a range of built-in technologies that ensure great sounding, reliable audio, every time.

### **Immersive in-ceiling and in-wall options**

Meridian's in-wall/in-ceiling **DSP320** loudspeaker combines premium audio performance with discreet, unobtrusive installation. Its compact enclosure, measuring just 100mm deep and 300mm square, makes it perfect for mounting in a wall or ceiling with easy installation and precise positioning. As a Digital Active Loudspeaker, the DSP320 contains two powerful 80W class amplifiers for wide-range and bass drivers, meaning that no external amplification equipment needs to be installed. This leaves more space available for other systems and reduces any unnecessary heat in the rack.

The DSP320 also features Meridian's Enhanced Bass Alignment (EBA) and Centre Elevation technologies, delivering exceptional bass and full-range audio performance. The result is a perfectly aligned, immersive audio experience where all ranges of sound reach the listener at one time. Designed for use in home theatres, media rooms, marine and commercial installations, the DSP320 is the perfect partner for Meridian's floor-standing loudspeakers.

Meanwhile, Meridian's **DSP640 and DSP520** in-wall digital active loudspeakers provide equally discreet, high-quality audio performance from a compact system. Requiring only a 100mm mounting depth, the DSP640 is the perfect in-wall music or movie solution that delivers wide sound dispersion and the minimum unwanted diffraction. Its internal 100W and 150W power amplifiers deliver wide-range and bass audio, and Centre Elevation technology for an incredibly lifelike cinema experience.

### **Special Edition Sound**

Meridian's renowned **DSP8000 Special Edition** digital active loudspeakers are the go-to product for superior quality sound. Providing a statement solution for advanced media rooms and reference level listening spaces in the home, the DSP8000SE delivers a phenomenal performance. These high quality speakers contain integral DAC's, pre-amplifiers, power amplifiers and built-in high efficiency digital crossovers.

The ingenious, yet elegant, design means that the loudspeaker enclosure contains the entire system's electronics. They are also controlled remotely, which means no unsightly speaker cables or obtrusive wiring. The DSP8000SE represents the pinnacle of Meridian's expertise in design aesthetic, high quality build and fantastic sound.

### **Enhanced M6 Available Now**

The award-winning M6 Digital Loudspeaker incorporates high performance amplifiers and a sleek, cylindrical design to complement any interior design scheme. It features Enhanced Boundary Control to eliminate bass boom, and a wide dispersion pattern to create superb, natural sound that can be enjoyed from any position.

With a revised and improved cabinet resin, the enhanced M6 digital active loudspeaker will be shipping from October. It will be available as a single loudspeaker with the addition of a 'mono' mode developed from the work undertaken on the DSP320. A single M6 provides a superb, discrete room-filling option when partnered with the Meridian 218 Zone Controller.

Designed and manufactured in the UK, all Meridian's DSP loudspeakers are the perfect addition to the modern interior setting whilst still providing a flawless sound solution for home cinema and media room applications. Featuring an unmatched range of innovative technologies, Meridian loudspeakers guarantee the best possible immersive audio experience for all, in any application.
